BRAINSTORMING & IDEA PRIORITIZATION

Project Name	Implement Client Script & UI Policy
Project ID	SWTID-20206-3268

1. Brainstorming

Identify practical ideas for implementing the client-side script and applying the required UI policy. The ideas below focus on functionality, usability, policy compliance, maintainability, and testing.

#	Brainstormed Idea	Expected Benefit
1	Define clear client-script requirements and UI policy rules.	Reduces ambiguity and implementation errors.
2	Use modular client-side functions/components.	Improves maintainability and reuse.
3	Add validation before applying UI changes.	Prevents invalid or unexpected UI states.
4	Handle edge cases and script failures gracefully.	Improves reliability and user experience.
5	Test the script across supported browsers/devices.	Improves compatibility.
6	Document the policy rules and implementation steps.	Makes future maintenance easier.

2. Idea Prioritization

Prioritize ideas using impact, feasibility, policy alignment, and implementation effort.

Priority	Idea	Impact	Feasibility	Effort
High	Define script requirements and UI policy rules	High	High	Low
High	Validation and safe UI-state handling	High	High	Medium
High	Cross-browser/device testing	High	Medium	Medium
Medium	Modular script/component structure	Medium	High	Medium
Medium	Failure and edge-case handling	High	Medium	Medium
Medium	Implementation documentation	Medium	High	Low

3. Selected Focus Areas

• Establish the client-script requirements and UI policy rules.

• Implement validation and predictable UI behavior.

• Test important user flows, edge cases, and supported environments.

• Document the final implementation for maintenance and review.
