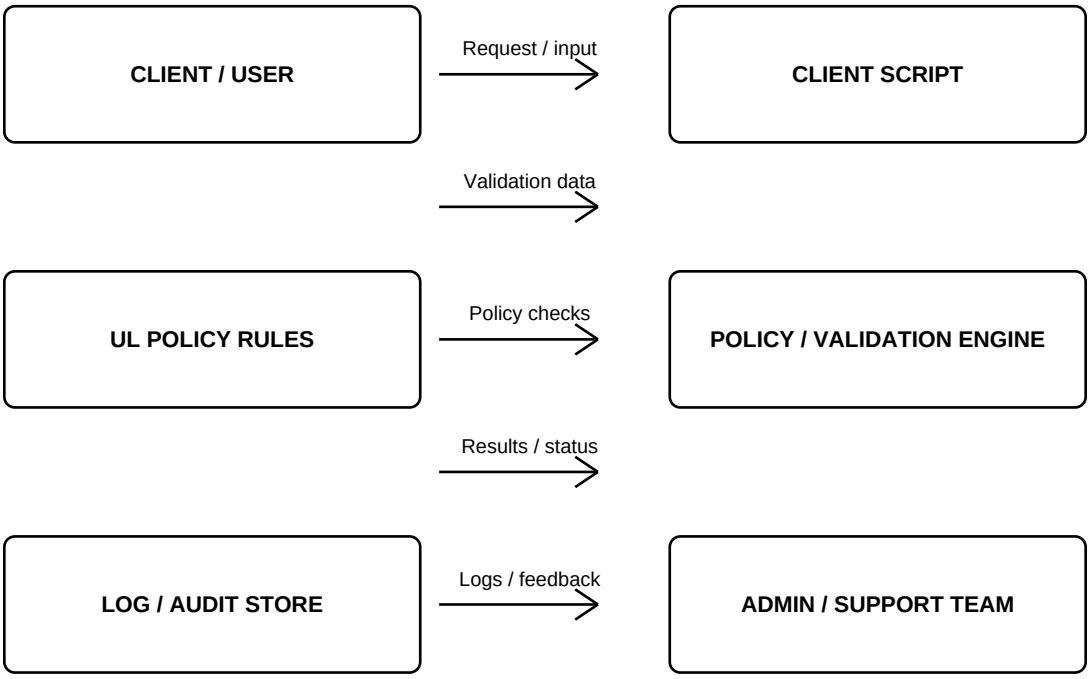
DATA FLOW DIAGRAM

Project Name: Implement Client Script & UL Policy
Project ID: SWTID-2026-3268

Level 0 – High-Level Data Flow



Data Flow Description

1. The client/user sends a request or input to the client script.
2. The client script processes the input and passes relevant data for validation.
3. UL policy rules are applied by the policy/validation engine.
4. Validation results and status are returned to the client script and communicated to the client/user.
5. Relevant activity, validation outcomes, and errors can be recorded in the log/audit store for support and review.
6. The admin/support team reviews logs and feedback and uses the information for troubleshooting and improvement.

Key Data Elements: Client request, configuration/input data, policy rules, validation result, status, audit logs, error/feedback information.
