PROJECT EXECUTABLE FILES

Date	15 March 2026	**Team ID**	SWTID-2026-3268
Project Name	Implement Client Script & UI Policy (Incident)	**Maximum Marks**	3 Marks

Step 1: Submission Checklist

S.No.	Item to Submit	Submitted (Yes / No / NA)	Notes
1	Complete source code (all files and folders)	No / Not provided	Export/update set or attach Client Script and UI Policy configuration.
2	README / Setup Guide	Prepared in this document	See Step 4 run instructions below.
3	requirements.txt / package.json / dependency file	NA	ServiceNow configuration project; no separate package dependency file specified.
4	Database schema / seed files (if applicable)	NA	Uses ServiceNow Incident table; no custom schema/seed file specified.
5	Environment configuration file (.env.example or similar)	NA	No external environment variables specified; do not include credentials.
6	Deployed application URL (if hosted)	Not provided	Add development/demo ServiceNow instance URL if permitted.
7	APK / Executable binary (if applicable)	NA	Not a mobile/desktop app; ServiceNow application configuration.
8	Dockerfile / Containerization config (if applicable)	NA	ServiceNow-hosted platform; container configuration not applicable.
9	Test files and test results	Not provided	Attach test cases, screenshots, and results after testing.
10	Demo video or walkthrough (if required)	Not provided	Add link if requested by evaluator.

Step 2: File / Folder Structure

Suggested deliverable structure (replace with the team's actual files):

Incident_ClientScript_UI_Policy/
■■■ README.md — setup and test instructions
■■■ ServiceNow_Configuration/ — exported update set or application configuration
■ ■■■ Client_Script_Incident.xml (if exported separately)
■ ■■■ UI_Policy_Incident.xml (if exported separately)
■■■ Test_Cases/ — test scenarios and evidence
■■■ Evidence/ — screenshots / demo walkthrough

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided — enter authorized ServiceNow instance URL
Login Credentials (Demo)	Not provided. Create evaluator access through approved account process; do not place passwords in this PDF.
Platform / Hosting Provider	ServiceNow platform (instance hosting provider not specified)
Repository Link	Not provided — add team repository URL if available
Demo Video Link	Not provided — add link if recorded / required

Step 4: Run Instructions

1. Sign in to the team's authorized ServiceNow development instance.
2. Open the Incident table/form and confirm the required Client Script and UI Policy records are available.
3. If using an exported update set, import it in a non-production instance and preview/commit according to the team's deployment process.
4. Open an Incident record and test the configured field visibility, mandatory/read-only behavior, and any client-side validation.
5. Test representative conditions, including normal and priority-specific cases defined by the project requirements.
6. Check for browser console errors and confirm the form can be saved when valid and blocks invalid submission when intended.
7. Capture screenshots/test results and record the instance URL and test date. Never share passwords in the submission.

Step 5: Known Issues / Limitations

S.No.	Known Issue / Limitation	Workaround / Status
1	Actual Client Script and UI Policy export files were not supplied with the template.	Attach the team's real update set/XML or application files.

S.No.	Known Issue / Limitation	Workaround / Status
2	Deployment URL, repository link, and demo credentials are not available.	Fill in approved links/access details before final submission; never include a password.
3	Test evidence and verification status are not available.	Run tests in a non-production instance and attach results/screenshots.

Important: The supplied form did not include the actual executable/configuration files, instance links, credentials, or test evidence. This PDF fills the fields with project-appropriate details and clearly marks unavailable items rather than claiming they were submitted.
