EMPATHY MAP

Project Name: Implement Client Script & UL Policy
Project ID: SWTID-2026-3268

SAYS	• We need the client script and UL policy to be implemented clearly. • The solution should follow the defined requirements and policy guidelines. • Any changes should be easy for the client/team to understand and validate.
THINKS	• Will the implementation meet the required policy and project objectives? • Could the script introduce unexpected behavior or compatibility issues? • How can the implementation remain secure, maintainable, and compliant?
DOES	• Reviews the current client-side implementation and policy requirements. • Implements, tests, and validates the client script. • Checks behavior against expected use cases and documents relevant outcomes.
FEELS	• Wants confidence that the implementation is correct and compliant. • May be concerned about defects, policy gaps, or integration issues. • Values clarity, reliability, and predictable results.
PAINS	• Unclear requirements or policy interpretation. • Integration or compatibility problems. • Insufficient testing, documentation, or validation.
GAINS	• A working and policy-aligned client script. • Clear implementation and validation criteria. • Better reliability, maintainability, and stakeholder confidence.

Objective: Understand stakeholder needs, concerns, behaviors, and expected outcomes to guide implementation of the client script and UL policy.
